

RELIABLE VEHICLE TRACKING SOLUTIONS

informapuae.com

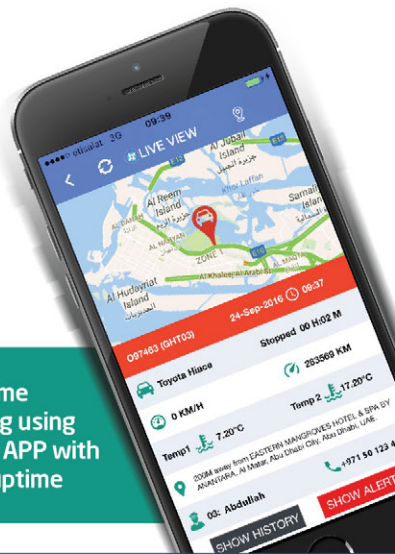

Operating in the UAE since 2002, Informap serves 1000+ UAE companies to manage their fleet using GPS Tracking Technology. With our proven hardware custom made in Korea, Taiwan and Europe, up-to-date content rich maps and in-house software development team, Informap is able to provide innovative GPS tracking solutions that have higher functional and monetary value. We are a team of dedicated Engineers and Technicians committed to providing professional and high quality services that are reliable, prompt and convenient.

» STANDARD GPS TRACKING SYSTEM

Ideal for small and medium businesses that require an affordable simple track and trace solution. Informap's flagship IT-300 GPS Tracking unit, made in Korea is a proven hardware used worldwide over a decade. It can withstand the heat and the tough Middle East operational environment. Bundled with Etisalat M2M SIM card, this ready-to-install solution can be made operational the very next day.

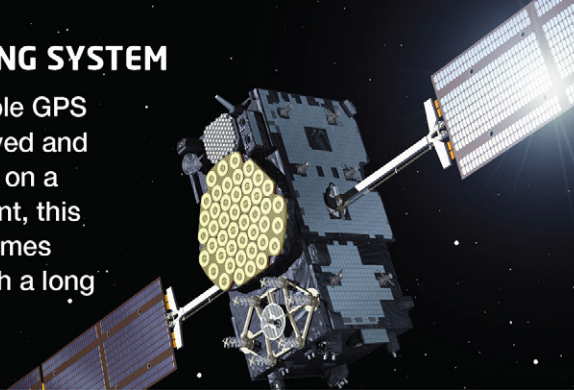

Real-time
tracking using
mobile APP with
99.9%uptime

» PLUG & PLAY ASSET TRACKING SYSTEM

When your business requires a portable GPS tracking unit that can be easily deployed and moved from one vehicle to another or on a moving asset such as heavy equipment, this solution is most suitable. This unit comes with options for direct charging or with a long life battery.

GPS TRACKER WITH CIGARETTE LIGHT CHARGER

Simply plug the tracker into the cigarette light jack and system becomes operational. The motion sensor in the GPS unit detects vehicle motion and collision impact. This unit has ultra-low current consumption in deep sleep mode.

GPS TRACKER FOR LUXURY VEHICLES

This device offers a reliable power source and a neat installation solution. GPS tracking unit is installed under the dashboard and the power is taken through OBDII power cable. The installation does not void vehicle warranty and no wires are cut or punctured. Alternatively, it can be plugged directly to OBD port.

WATER-PROOF MOTOR CYCLE TRACKER

Featuring ultra-low power consumption in deep sleep mode, IP66 waterproof casing, internal antenna, built-in G-sensor, I/O connectivity, driving behavior, event management and user-defined reports, this tracking unit is an ideal solution for Motorcycle and boat tracking.

GPS TRACKER WITH RECHARGEABLE BATTERY & WALL CHARGER

For **long distance** inter-state leased trucks, this solution is appropriate. It has a rechargeable battery that can last upto one month. Options to charge using cigarette light charger or using a standard wall socket is provided.

» ADVANCED GPS TRACKING SYSTEM WITH IoT

These solutions use advanced GPS hardware coupled with industry grade sensors carefully installed by experienced technician. Specialized modules are integrated into the main application environment for real-time monitoring and to generate instant reports or to schedule reports from report factory. SMS/E-mail alerts are sent upon detecting exceptions.

What gets measured, gets improved.

MULTI-DRIVER SOLUTION USING RFID

GPS tracking unit is connected to an RFID Reader. Each user/driver of the vehicle is issued with a unique personalized RFID card. On non-emergency vehicles, driver can start engine only by swiping the card. In emergency vehicles, such as ambulances, sound alarm is triggered and back office is alerted if the driver did not swipe the card. Advanced usage reports based on specific driver can be generated to analyze overtime or violations such as traffic fines.

MONITORING COOLING UNIT TEMPERATURE

GPS Tracking unit is connected to industry grade temperature sensors in the cooling unit. If the cooling compartment is longer, 2 sensors are installed to measure temperature in the blower side and in the middle. The application is programmed to send Email/SMS alerts if there is variation from the set temperature lower and upper limit.

TRACTOR - TRAILER TRACKING

GPS tracking unit is installed in the tractor and a specialized ID tag is installed in the trailer. Both are connected through hard wire connection in such a way that the Tractor GPS unit is able to receive the trailer's TAG ID when it remains connected. Application displays which trailer is connected to the tractor and allows generating trailer usage reports.

» ROUTE PLANNING & HOME DELIVERY SOLUTIONS

MOBILE RESOURCE PLANNER (MRP)

MRP offers a customized real-time solution to manage a company's vital 3 mobile resources namely; vehicle, people and their tasks. MRP allows route planning and managing visit, delivery, collection and service jobs.

RIDER ASSIGNMENT & TRACKING (RATS)

RATS provide a customized solution for Fast food companies and restaurants to manage home delivery orders and bike riders. Orders can be assigned to riders before reaching store, assembly is quicker and delivery is faster.

Why Choose Informap?

- 15 Yrs in the UAE, Serving 1000+ customers
- Certified by DED / TRA / DPS / Secure Path
- Own server infrastructure, 99.9% uptime
- Proven platform and Mobile Apps
- Reliable GPS Units & qualified installers
- Affordable fee & easy installment plans.

WORKER ATTENDANCE TRACKING (WOX)

WOX is designed and developed for companies who pick-up their workers from labour accommodation / camps and drop them off in different project sites. WOX solves worker site attendance challenges and project specific worker time sheets. Management will have greater control of the workers and a reliable system for tracking their work.

PASSENGER TRACKING & ATTENDANCE (PAX)

PAX is exclusively developed for passenger (student/staff) transportation companies who require Entry/Exit control for attendance management with GPS tracking. PAX solution gives visibility to all stakeholders such as fleet managers, transport provider and parents. PAX also allows live monitoring using WIFI camera.
